A MAJOR ASSOCIATION FOR THE PACKAGING INDUSTRY

Since June 29, 2018, CGL Pack has joined the Danish Faerch Plast Group. This association will occur many development opportunities and a wide range of products. The Faerch group has significant manufacturing capacity with 12 production sites in Europe, including the two French sites of CGL Pack (Annecy and Lorient).

With the recent acquisition of the Dutch company 4PET (4 sites in the Netherlands), leader in the manufacture of thermoforming sheets, through the use of PET bottles and trays, resulting from post-consumer, Faerch becomes a major player in recycled food packaging and one of the first integrated plastic packaging suppliers to achieve a truly circular economy with the recycling of food trays on an industrial scale.

At the ALL4PACK show in November 2018, CGL and Faerch will present a wide range of packaging around food packaging: environmentally-friendly packaging such as recycled PET-based trays, trays made of CPET (traditional oven ovens and microwaves), and materials such as MAPET® II or Clearseal® which, in addition to their exceptional sealing properties, also have the advantage of having an environmental balance reduced by 50% compared to existing traditional solutions on the market.

CGL Pack will also present its packaging manufacturing for the pharmaceutical and consumer goods sector with standard and specific ranges. Up to now, these two sectors account for more than 37% of CGL's sales. The company is determined to continue the development of these markets thanks to its increased expertise in these sectors for many years. CGL Pack offers its customers safe and functional solutions produced in a clean environment (ISO7 room) on the Annecy site (74).

Join us on our stand ALL4PACK number 7B112 from 26 to 29 November 2018.
