

We are wrapping up the 2018 Meler trade fair season in Paris: All4pack

More than 80,000 packaging and logistics professionals from 100 countries will attend this unmissable event in November: All4Pack, the French professional packaging and logistics fair, which will be held from 26 to 29 November in Paris Nord Villepinte. Focke Meler will be there with around 1,350 other exhibitors.

You will be able to see all of Focke Meler's latest developments at Stand 7 E 228, where you'll have the chance to try our new PC StarBI pattern controller.

This year at All4Pack, special importance will be placed on Industry 4.0 and ecology, with our PC StarBI products and the Micron series being clear examples of both.

With the PC StarBI, the tactile trigger programmer for hot melt and cold glue applications with variable speed and timing, Focke Meler is venturing into Industry 4.0, interconnecting all its systems with this pattern controller and its 7" touchscreen.

Meanwhile, the Micron series features great energy savings, able to reduce consumption by up to 60% thanks to its melting and pumping efficiency. This range of melters has received the RED DOT AWARD in recognition of its quality, features and design.

We will also have the HS Microprecision applicator, specially equipped for high-speed machinery. Its precision in adhesive application makes this applicator perfect for the packaging market.

Would you like to come? Write to us at marketing@meler.eu to get your invitation.

See you at All4Pack Paris!
