

Karlville Launches new compact stand up pouch converting machine

For Press Release – 11/19/2018

Pouch making manufacturing needed to address challenges resulted from rapid evolution of process and technology before pouch making process. To answer this need, Karlville launched the KS-DSUP-400 thermal pouch making machine at the Pack Expo International 2018 show in Chicago, USA, this past October.

After being in flexible packaging market for more than 15 years and interacting with key players in the packaging market and understanding their value proposition, Karlville decided to develop this new model based on the feedback received.

The KS-DSUP-400 is a compact and easy to use equipment designed for high-performance 3-side-seal and stand-up pouch production, especially for the digitally printed pouch market.

Its key advantages are:

- Compact design (8m length)
- Low scrap rate during machine start-up
- Easy to set up and tool-less fast changeover
- Pneumatically locked sealing and cooling dies
- Intuitive user-friendly HMI (touchscreen)

Being designed for short runs, quick changeovers and flexibility, the KS-DSUP-400 model has been created to serve the needs of both seasoned and new pouch converters. The machine will give customers who are not yet in the manufacturing of pre-made pouches, the possibility to purchase an easy to use asset at a reasonable price with an excellent investment pay-back.
